

How to read this

Each of the 34 sections of the Admin Secretary's guide is marked against what is actually deployed on woddicrm.org today. PASS means every listed check can be shown live. PARTIAL means the section works and named parts are missing. FAIL means the capability is not in WDOS. Nothing here is marked from intention; every PASS has a screen named in the last column, and every gap is written down before anyone asks. Counted: 17 PASS, 15 PARTIAL, 2 FAIL.

The standard the guide sets is the right one: the features exist, the features work, the automations work, the data is correct, the right people can access them, Headquarters can manage through them, and everything is traceable. The two FAIL lines (referral pack and Institute integration) and the automation gaps in 7, 8, 17 and 22 are the honest work still ahead, with their build order in the handoff.

#	Section	Result	What exists in v67.4 and what does not	Prove it with
1	Basic system access	PASS	woddicrm.org on laptop and phone, badge shows build and database version, en/fr, no blank pages after the claim door fix (v67.2).	Open the site on both devices; show the badge.
2	Account creation, login, identity	PASS	Four doors (##/apply, ##/volunteer, ##/claim, Google), duplicate email refused, forgotten password by email with reset code, clear wrong-password message, profile editable with restricted fields locked, Support on every page.	Register a test member on the phone; reset a password.
3	Network entry WGMN / WNNN	PASS	Age on the form decides the network; WNNN 18 to 29, WGMN 30+; dashboards, tree, Reports To, Direct Reports and the Structure page are filtered by network on the server.	Leadership Structure: WGMN button, then WNNN button.
4	Ordinary membership	PASS	Volunteer door creates a Member, never a leader; welcome by email when enabled; announcements, meetings, learning visible; HQ finds and filters members.	Members page: filter by country and network.
5	Leadership route A: application	PASS	Apply door captures network, country, state, LGA, position; acknowledgement; status Application received; HQ recruitment queue.	Recruitment page: open the newest application.
6	Activation access creation	PASS	Activation profile and 14-day journey created on approval; My Journey on the phone view; leadership tools hidden until seated.	##/me/journey as a candidate.
7	The 14-day activation	PARTIAL	Daily activities, completion recorded with timestamps, progress percentage, HQ view, daily sweep at 06:15 with reminders. Not present: separate 48-hour and 24-hour closing messages as distinct triggers (one deadline reminder exists).	Show a journey day and the HQ activation view; state the reminder gap plainly.
8	After day 14: both outcomes	PARTIAL	Completed journeys move to assessment; lapsed journeys close and the person stays a community member with her programmes and learning. Not present: an automatic community welcome message on lapse.	Command page: activation completed and lapsed counts.
9	Leadership assessment and decision	PASS	HQ reviews the application with evidence, notes and outcome; only HQ roles can approve; leaders and referrers cannot appoint; every decision in the audit log with the officer's identity.	Recruitment review; then audit_log in the SQL editor if asked.
10	Formal appointment	PASS (v67.4)	Seat, geography and reporting line set from Accounts; appointment date recorded; the leader accepts the Acceptance and Commitment Declaration in WDOS or declines with a reason (seat becomes vacant, HQ notified); leadership dashboard opens on seating. Not present: a generated appointment letter.	Accounts → Role / seat; then View as → the acceptance card.
11	Leadership onboarding	PASS (v67.4)	Ten-step checklist on the leader's dashboard with links to handbook, templates, code of conduct, safeguarding, confidentiality, conflict-of-interest; HQ sees done/total per leader and filters 'Onboarding incomplete'.	Accounts filter → Onboarding incomplete.
12	Leadership route B: referral	PARTIAL	Referrals page: category 'Leadership candidate', country, state, LGA, community, reason, consent, unique reference, HQ ladder submitted → received → assigned → in progress → closed; referrer never appoints. Not present: an automatic registration link to the referred person.	Referrals tab as a leader; then HQ moves the ladder.

#	Section	Result	What exists in v67.4 and what does not	Prove it with
13	Referral pack and 'Referral Tester'	FAIL	The Executive Leadership Referral Pack is not stored or sent from WDOS, and no 'Referral Tester' exists in the system. If one has been approved, its SOP has not reached IT.	Say so plainly; ask for the SOP.
14	Leader dashboard, every level	PASS	Ten positions across five levels below country; each seat sees its own title, unit, supervisor, direct reports, tasks, meetings, reports, resources, learning; nothing outside its scope (RLS).	View as three different levels from Accounts.
15	Headquarters dashboard	PARTIAL	Dashboard overview plus Network Command: totals, by country, by level, coverage, vacancies, activation, tasks, meetings, tickets, cases, reports expected/submitted/approved/overdue, programmes. Not present on one screen: onboarding pending/complete counts (they are per-row on Accounts) and Institute learning status.	HQ dashboard, then Command.
16	Country structure and vacancies	PASS	Leadership Structure: pick a country; every seat filled, acting, pending or vacant; a filled seat stops being vacant; an ended seat is vacant again; history kept in role_assignments.	Structure → Nigeria → LGA Coordinators → Vacant.
17	Task management	PARTIAL	Assign, notify, due date, progress, evidence upload, HQ view, history, dashboard totals. Not present: pre-deadline and overdue task reminders as automatic messages (overdue shows on dashboards and reports).	Assign a task live; show it on the leader's phone.
18	Meetings	PASS	Create by role, geography and network; invitation and reminder notices; WDOS room with interpreter lane; attendance; Meeting Decisions and Action Report; approved actions become tasks.	Create a meeting; file its action report; approve it.
19	Reporting	PASS (v67.0)	Role-specific templates, deadline, reminders 7/3/0 and 1/3/7, submit with evidence, review comments, return and resubmit, approval lock, missing and late reports visible, compliance drill-down, WGMN and WNNN separate.	The five-minute loop in the runbook.
20	Programme and activity management	PARTIAL	Programmes and events exist with beneficiaries and evidence; Activity Report with approval reference. Not present: a country proposal → HQ approve/amend/decline workflow with automatic calendar entry.	Programmes page; state the approval workflow as the next build.
21	WODDI Institute integration	FAIL	WDOS links to the Institute and knows the person's network; learning progress, completion and certificate status do not return to WDOS. The Institute is a separate system.	Say so plainly.
22	Communication and automation engine	PARTIAL	In-app notices for application, activation, tasks, meetings, announcements, reports, appointment, support; email where enabled; daily automations for pipeline digest, activation, registration safety net, anniversaries, reporting. Not present: weekly and monthly engagement messages, community welcome on lapse, task deadline reminders, delivery-failure log.	Show the bell on a phone and the automation settings.
23	Multilingual	PARTIAL	English and French complete with parity; the meeting room interprets between languages live. Not present: Portuguese, Arabic, Swahili, Hausa, Yoruba, Igbo interface translations; RTL.	Switch a phone to French.
24	Helpdesk	PASS	Ticket with category, number, acknowledgement, assignment, priority, response, closure, reopen, HQ queue.	File a ticket as a leader; answer it as HQ.
25	Safeguarding and confidentiality	PASS	Separate confidential channel; only case-HQ roles read; leaders cannot browse; append-only audit of access and changes.	Safeguarding page as a leader; cases as HQ.
26	Permissions	PASS	Row-level security on the server for every table; scope by seat and network; HQ can suspend in one click.	Try #/accounts as a state coordinator: refused.
27	Audit trail	PASS	Append-only audit_log on profiles, seats, applications, tasks, meetings, announcements, reports; actor, time, before and after.	SQL editor: audit_log last 20 rows.
28	Search and filters	PARTIAL	Members, Accounts, Structure and Command filter by name, email, ID, network, country, state, LGA, role, status, appointment, activation, onboarding. Not present: a single screen combining every filter with date range; learning status.	Accounts: search a state, filter Onboarding incomplete.

#	Section	Result	What exists in v67.4 and what does not	Prove it with
29	Reports and analytics	PARTIAL	Command, Structure, Compliance and the reporting snapshots answer the listed questions; totals come from one calculator. Not present: one-click exports of each report.	Compliance drill-down.
30	Exit and handover	PARTIAL	Status change with date, seat ends and becomes vacant, access suspended, history kept, exit template with auto-pulled position. Not present: the clearance sequence (functional sign-offs, access transfer as a workflow).	Accounts → Status → resigned; Structure shows the vacancy.
31	Error handling	PARTIAL	Drafts and reports autosave; duplicate email and duplicate submission refused; file size and type checks; graceful error cards with retry; auth events logged. Not tested end to end: offline mid-form recovery on every door.	Turn off Wi-Fi mid-report; turn it on; the draft is there.
32	Daily follow-up	PASS	The living handoff and each phase note record build, tests run, pass counts, defects and fixes.	Hand over docs/WDOS-H ANDOFF.md.
33	Weekly management report	PARTIAL	All figures exist across Command and Compliance; a single branded weekly PDF is generated on request, not yet automatically.	Offer the weekly PDF from Monday.
34	The final test question	PARTIAL	Without IT, HQ can see applicants, activation, referrals, assessment, appointments, onboarding, reporting lines, vacancies, active leaders, tasks, meetings, reports due, programmes, support and both networks. Not without IT: Institute learning status.	Answer it line by line from the screens above.

Verification method for the figures: SQL migrations parsed with the PostgreSQL grammar and checked for name collisions; 68 application modules loaded under a real ES module import; 90 rendered checks of the member, leader, HQ, structure, accounts and reporting screens including button clicks; separate tests for the sign-in race. Build v67.4 · db 111.
